WILL'S CIGARETTES

Stevens' Screw Propeller.

In 1804 Colonel John Stevens built a vessel propelled by twin screws, which navigated the Hudson River, and attained a speed of nine miles per hour, but for many years the idea of screw-propulsion was abandoned by engineers in favour of the paddle-wheel. The first large sea-going screw steamer was the *Archimedes*, of 232 tons register. She was built in 1838, and proved a complete success.
